

Calved Event

Symptoms:

There have been some problems encountered when editing or otherwise changing the Calved event, especially if the additional of a calf ID to the Calved event is interrupted either accidentally or deliberately. This damages the animal index and can corrupt records.

Cause:

We do not know why this sequence of events causes this problem.

Solutions:

- The main solution is to go to File / highlight the name of your farm and press the F4 key. This will reorganize the data. You may lose the information you just entered.
- Do not edit the Calved event. Make sure you have all the information you are ever going to need for the Calved event immediately at hand.
- Upgrade to Version 3.0 Release 1.10. This prevents you from editing the Calved events.

More to come.....
