

## **No Eligible Animals on Action Lists**

### **Symptoms:**

Since January 1, 2001, some users have encountered a problem with our "list" reports, notably the BST Start list, where no animals are found to be eligible, even though the user is certain that many cows should appear.

### **Cause:**

This seems to be an actual "Y2k+1" bug. The report runs fine if you only run it once, but by running it again, DairyCHAMP fails to refresh the date field, loses track of that date, and fails to display the eligible animals.

### **Solution:**

Re-type the date into the date field, even if that date is the same as when you first ran the report, then re-run the report. The eligible animals should return. If they do not, call 651-335-5585 and report continuing difficulties with this bug.
