

## Unable to Change dictionary item "Sign of Heat"

### Symptom:

In Data Entry, the Sign of Heat field in the AI event is fixed. The user is unable to add, edit or delete from the list, even by going into Edit Lists in Program Set up.

### Cause:

During programming of DairyCHAMP 3.0, this was never added to the pool of lists that would need to be edited by the user. Subsequent addition of that ability would compromise data integrity.

### Solution:

We added some more items to this list, and the user may be unaware that in Release 1.06 and beyond, the list became "scrollable", that is to say the F2 pop-up may have more items on it than you are currently using.

This will stay this way for the life of 3.0, but will be changed when we move up to the Windows version of DairyCHAMP.
